Progress Report 9

Date: 2020-02-24
Members: Edwin Aldrich, Logan Drescher, Bettina King-Smith

Overview

The past two weeks have been somewhat slow in terms of development. This is a result of moving in, dealing with mice, etc. There are two core efforts happening at the moment. The first is the integration of the Algorithm (and necessary auxiliary development), and the development of the GUI.

Accomplished

- **Bettina has minimalized the PoC, moved the files to the Spring Boot repo**. This work feeds directly into getting the prototype of our application in working order, which will be one step away from our MVP.
- **Logan created a plan for Integrating the PoC, and has begun developing the GUI**. Currently there is a working FileDialog that successfully filters and searches for files.
- **Edwin investigated GUI options, and is in the middle of learning AWT**. Edwin has been hit the hardest by the mice assault (see next bullet), and so he has had less time than expected to work on the project.
- **Everyone is trying to fight back the neverending assault of the mice on our living spaces.** This is not expected to resolve soon, but we'll keep you updated.

Next Tasks

Our top priorities before the next meeting will include:

- **Continue working on our tasks.** They're not exactly simple tasks, and will require time to complete.
- **Hear back from Prof. Yoon about the College's enrollment advisor(?)**. He said he'd figure out how to put us in contact, and we're eager to follow up on it and see what we can find out.
